

# GREEN CAMPUS PROGRAMME

*“Green Campus Programme enables schools and colleges to conserve natural resources like water and biodiversity, optimize energy efficiency, manage waste and educate about climate change and sustainability while addressing well-being of the students as compared to conventional educational institutes.”*

The Green Campus Programme (GCP) is the flagship initiative of The Climate Project Foundation. Aligned with our vision and mission for a sustainable future, GCP acts as a powerful transformative catalyst. As its name implies, it converts traditional campuses into sustainable green campuses.

We believe that the climate crisis requires long-term, impactful solutions, and education is the most effective tool for this purpose. By instilling values that make future generations more environmentally conscious, we aim to enhance learning by setting examples directly on the campuses of schools, colleges, and universities.

21+ STATES | 1000+ EDUCATIONAL INSTITUTES | 17000+ TEACHERS TRAINED

# HOW GREEN CAMPUS PROGRAMME WORKS?

## AWARENESS

This unique and copyrighted program amalgamates various learning methodologies with a Project-based and Cooperative Learning Approach.

After an educational institution registers, we start with a workshop for teachers to make them aware about climate change, provide them with teaching resources and offer them an online course. This boosts the teachers' confidence to take the issue of climate change to their classes and talk about the science, impacts, and solutions.

### TEACHERS TRAINING WORKSHOP

It is a half-day workshop on climate change, Sustainable Development Goals (SDGs), and the six thematic areas of green campus.

### EDUCATIONAL RESOURCES

Teachers are provided with Online Teaching Resources like Posters, Infographics, Comics, Workbooks, Booklets.

### ONLINE PROGRAMS

Teachers are offered a free Online Certification course on climate change to learn more about the issue and in-hand solutions.

## ACTION

GCP empowers schools and colleges to conserve water and biodiversity, improve energy efficiency, manage waste, and educate about climate change and sustainability. This holistic approach prioritizes students well-being in contrast to the practices observed in traditional educational institutions.

## Our 5 Key Thrust Areas are:

**AIR QUALITY  
& HEALTH**

**BIODIVERSITY**

**WASTE  
MANAGEMENT**

**WATER  
MANAGEMENT**

**ENERGY  
EFFICIENCY**

We invite educational institutions including schools, colleges, universities, and educational societies to register for the Green Campus Programme. Participating institutions will concentrate on these thrust areas, receiving continuous guidance and support, followed by an audit and awards, and recognition.

## ACCOLADES

Through the Green Campus Programme, institutions embark on a journey towards environmental stewardship and student well-being. Through innovative initiatives and practices, these institutions not only conserve resources but also inspire and educate the next generation on climate change and sustainability.

The awards and recognition under the Green Campus Programme acknowledge the remarkable impacts of these efforts. Institutions receive certificates, trophies, and ratings based on their sustainability achievements. Furthermore, certified institutions have the opportunity to pursue additional recognition through IGBC certification.

**PLATINUM**

**GOLD**

**SILVER**

**BRONZE**

**CERTIFIED**

## BENEFITS OF GCP

- Improved well-being and Reduced absenteeism
- Optimized waste management
- Sustainable School Community
- Enhanced biodiversity value
- Efficient Water Management
- Reduced Power bills

- Community-based Engagement
- Exposure to nature and nature-based learning
- Green Campus Recognition
- Leverage Large Network
- Climate Aware Community

Join hands with us and be a part of the Revolutionary Transformational Journey!
